Office Action Summary

Application No.

10/660,850

Applicant(s)

ARMSTRONG ET AL.

Examiner

TALIA CRAWLEY

Art Unit

3687

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-23 is/are pending in the application.
- 4a) Of the above claim(s) none is/are withdrawn from consideration.
- 5) ☐ Claim(s) 1-2 is/are allowed.
- 6) ☒ Claim(s) 1-23 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 27 October 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. ____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/CDC)
- 4) ☐ Interview Summary (PTO-413)
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: ____
- Paper No(s)/Mail Date ____

DETAILED ACTION

Prosecution History Summary

Upon further review of the arguments provided by the applicant in the Pre-Appeal Brief filed December 11, 2008, the Final Office Action mailed September 26, 2008 has been withdrawn. The prosecution of this application is hereby reopened.

The following is a **NON-FINAL** Office Action in response to the communication received on December 11, 2008. Currently, claims 1-11 are pending in this application.

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-11 are rejected under 35 U.S.C. 101. The claimed invention is directed to non-statutory subject matter. Based on Supreme Court precedent¹ and recent Federal Circuit decisions, the Office's guidance to examiners is that a USC 35 101 process must (1) be tied to another statutory class (such as a particular apparatus) or (2) transform underlying subject matter (such as an article or

Art Unit: 3687

materials) to a different state or thing.² If neither of these requirements are met by the claim, the method is not a patent eligible process under USC 35 101 and should be rejected as being directed to non-statutory subject matter.

An example of a method claim that would not qualify as a statutory process would be a claim that recited purely mental steps. Thus, to qualify as a USC 35 101 statutory process, the claim should positively recite the other statutory class (the thing or product) to which it is tied, for example by identifying the apparatus that accomplishes the method steps, or positively recites the subject.

¹ *Diamond v. Diehr*, 450 U.S. 175, 184 (1981); *Parker v. Flook*, 437 U.S. 584, 588 n.9 (1978); *Gottschalk v. Benson*, 409 U.S. 63, 70 (1972); *Cochrane v. Deener*, 94 U.S. 780, 787-88 (1876). The Supreme Court recognized that this test is not necessarily fixed or permanent and may evolve with technological advances. *Gottschalk v. Benson*, 409 U.S. 63, 71 (1972).

Here, applicant's method steps, fail the first and second prongs of the new Federal Circuit decision since they are not tied to another statutory class and can be performed without the use of a particular apparatus. In order to be considered statutory subject matter for examination purposes, a process claim must recite another statutory class within the body of the claim (i.e. a machine or computer), that is associated with a core significant function of the claim. The recitation of a machine in the preamble is no longer sufficient to render a claim statutory. Appropriate correction and/or clarification is required.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

6. Claims 1-8 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tamaki et al (US 6,226,561) in view of Dangat et al (US 6,041,267).

Regarding **claim 1**, Tamaki et al. disclose a method for resolving demand and supply imbalances comprising: identifying at least one excess component inventory liability or at least one constraint in supply capability for an end product by matching current buying patterns for said end product against inventory

Art Unit: 3687

liability and supply capability based on a previous demand forecast (see for example column 2, lines 37-64 and column 3, lines 1-12); where excess component inventory liability exists: refocusing said at least one excess component inventory liability by determining alternative end products that use components identified in said at least one excess component inventory liability (see for example column 3, lines 1-27). Tamaki et al does not explicitly disclose wherein where constrained supply capability exists: determining alternative end products that are functionally equivalent to those identified in said at least one constrained supply capability.

However, Dangat et al does disclose wherein where constrained supply capability exists: determining alternative end products that are functionally equivalent to those identified in said at least one constrained supply capability (see for example column 9, lines 36-42).

Therefore, it would have been obvious to one of ordinary skill in the art, at the time of the invention, to have modified the method of Tamaki et al so as to have included determining alternative end products that are functionally equivalent to those identified in said at least one constrained supply capability, in accordance with the teaching of Dangat et al, in order to reduce excess inventory liability, since so doing could be performed readily and easily by any person of ordinary skill in the art, with neither undue experimentation, nor risk of unexpected results.

Neither the prior art reference Dangat et al nor Tamaki et al explicitly disclose executing sales activities operable for enticing sales of functionally equivalent alternative end products; wherein said sales activities result in reducing said at least one excess component inventory liability or avoiding said at least one constraint in supply capability. However, using sales activities to entice customers to purchase excess merchandise is well known to those of ordinary skill in the art, and official notice to that effect is hereby taken.

It would have been obvious to one of ordinary skill in the art, at the time of the invention, to have modified the method of Tamaki et al in view of Dangat et al so as to have included using sales activities to entice customers to purchase excess merchandise in order to reduce excess inventory liability, since doing so could be performed readily and easily by any person of ordinary skill in the art, with neither undue experimentation, nor risk of unexpected results.

Regarding **claim 2**, Tamaki et al. disclose the method of claim 1, wherein said identifying at least one excess component inventory liability or at least one constraint in supply capability includes: exploding a bill of materials for a product structure based upon a sales forecast, demand data, and supplier commitment data (see for example column 3, lines 58-61), but does not explicitly disclose the method of claim 1 where identifying at least one excess component inventory liability or at least one constraint in supply capability includes: imploding results of said exploding into end products and an available to promise statement;

translating said results into lead times for delivery; and identifying remaining results not included in said available to promise statement as excess component inventory liability or constraint in supply capability for an end product.

However, Dangat et al. teach the method of claim 1, but include the method of claim 1 where identifying at least one excess component inventory liability or at least one constraint in supply capability includes: imploding results of said exploding into end products and an available to promise statement (see for example column 10, lines 44-67 and column 11, lines 1-2); translating said results into lead times for delivery; and identifying remaining results not included in said available to promise statement as excess component inventory liability or constraint in supply capability for an end product (see for example column 11, lines 16-20 and column 9, lines 29-41).

Therefore, it would have been obvious to a person of ordinary skill in the art, at the time of the invention, to implement identifying at least one excess component inventory liability or at least one constraint in supply capability including imploding results of said exploding into end products and an available to promise statement translating said results into lead times for delivery; and identifying remaining results not included in said available to promise statement as excess component inventory liability or constraint in supply capability for an end product with the invention as disclosed by Tamaki et al, because by utilizing an available to promise statement and determining lead times for various products to determine what materials are in excess or constrained, a company would be able to determine the amount of time and inventory available to

complete customer order requests, thereby reducing production time and reducing liability.

Regarding **claim 3**, Tamaki et al. disclose a method for resolving demand and supply imbalances, the refocusing said at least one excess component inventory liability by determining alternative end products that use components identified in said at least one excess component inventory liability includes performing a supply liability reduction process comprising: a procurement and development assessment sub-process including mitigation activities, said procurement and development assessment sub-process mitigation activities representing a greatest magnitude of liability (see for example column 1, lines 30-34 and 45-52 and column 2, lines 1-6).

Neither the prior art reference Tamaki et al. nor Dangat et al explicitly disclose that the procurement and development sub-process mitigation activities are performed first in time before other sub-processes.

However, it would have been obvious to one of ordinary skill in the art, at the time of the invention, to have performed the steps disclosed by Tamaki et al. in an order such that the procurement and development sub-process mitigation activities would be performed first in time before other sub-processes, since so doing could be performed readily and easily by any person of ordinary skill in the art, with neither undue experimentation, nor risk of unexpected results, and since it has been held that selection of any order of performing process steps is prima

facie obvious in the absence of new or unexpected results. *In re Burhans*, 154 F.2d 690, 69 USPQ 330 (CCPA 1946).

Regarding **claim 4**, Tamaki et al. disclose the method of claim 3, wherein said performing a supply liability reduction process further includes: a liability council assessment sub-process including mitigation activities, said liability council assessment sub-process mitigation activities representing a magnitude of liability less than that of said procurement and development assessment sub-process (see for example column 1, lines 30-34 and 45-52 and column 2, lines 1-6),

Neither the prior art reference Tamaki et al. nor Dangat et al explicitly disclose the method of claim 3, wherein said liability council assessment sub-process mitigation activities are performed second in time after said procurement and development assessment sub-process.

However, it would have been obvious to one of ordinary skill in the art, at the time of the invention, to have performed the steps disclosed by Tamaki et al. in an order such that the liability council assessment sub-process mitigation activities would be performed second in time after said procurement and development assessment sub-process, since so doing could be performed readily and easily by any person of ordinary skill in the art, with neither undue experimentation, nor risk of unexpected results, and since it has been held that

Art Unit: 3687

selection of any order of performing process steps is prima facie obvious in the absence of new or unexpected results. *In re Burhans*, 154 F.2d 690, 69 USPQ 330 (CCPA 1946).

Regarding **claim 5**, Tamaki et al. disclose the method of claim 3, wherein said performing a supply liability reduction process further includes: a sales activities sub-process including mitigation activities, said sales activities sub-process mitigation activities representing a magnitude of liability less than that of said liability council assessment sub-process,

Neither the prior art reference Tamaki et al. nor Dangat et al explicitly disclose the method of claim 3, wherein said sales activities sub-process mitigation activities are performed third in time after said liability council assessment sub-process.

However, it would have been obvious to one of ordinary skill in the art, at the time of the invention, to have performed the steps disclosed by Tamaki et al. in an order such that the sales activities sub-process mitigation activities would be performed third in time after said liability council assessment sub-process, since so doing could be performed readily and easily by any person of ordinary skill in the art, with neither undue experimentation, nor risk of unexpected results, and since it has been held that selection of any order of performing process

Art Unit: 3687

steps is prima facie obvious in the absence of new or unexpected results. *In re Burhans*, 154 F.2d 690, 69 USPQ 330 (CCPA 1946).

Further, neither the prior art reference Tamaki et al. nor Dangat et al explicitly disclose the method of claim 3, wherein said sales activities sub-process mitigation activities represent a magnitude of liability less than that of said liability council assessment sub-process.

However, allocating a sales activities budget that is less than that of said liability council assessment sub-process is well known to those of ordinary skill in the art, and official notice to that effect is hereby taken.

It would have been obvious to one of ordinary skill in the art, at the time of the invention, to have modified the method of Tamaki et al in view of Dangat et al so as to have included allocating a sales activities budget that are less than that of said liability council assessment sub-process in order to reduce excess inventory liability, since doing so could be performed readily and easily by any person of ordinary skill in the art, with neither undue experimentation, nor risk of unexpected results.

Regarding **claim 6**, Tamaki et al. disclose the method of claim 3, wherein said performing a supply liability reduction process further includes: a liability write off sub-process including mitigation activities, said liability write off sub-

Art Unit: 3687

process mitigation activities representing a magnitude of liability less than that of said sales activities,

Neither the prior art reference Tamaki et al. nor Dangat et al explicitly disclose the method of claim 3, wherein said liability write off sub-process mitigation activities are performed fourth in time after said sales activities sub-process.

However, it would have been obvious to one of ordinary skill in the art, at the time of the invention, to have performed the steps disclosed by Tamaki et al. in an order such that the liability write off sub-process mitigation activities would be performed fourth in time after said sales activities sub-process, since so doing could be performed readily and easily by any person of ordinary skill in the art, with neither undue experimentation, nor risk of unexpected results, and since it has been held that selection of any order of performing process steps is prima facie obvious in the absence of new or unexpected results. *In re Burhans*, 154 F.2d 690, 69 USPQ 330 (CCPA 1946).

Further, neither the prior art reference Tamaki et al. nor Dangat et al explicitly disclose the method of claim 3, wherein said liability write off sub-process mitigation activities represent a magnitude of liability less than that of said sales activities.

However, allocating a liability write off budget that is less than that of said sales activities sub-process is well known to those of ordinary skill in the art, and official notice to that effect is hereby taken.

It would have been obvious to one of ordinary skill in the art, at the time of the invention, to have modified the method of Tamaki et al in view of Dangat et al so as to have included allocating a liability write off budget that is less than that of said sales activities sub-process in order to reduce excess inventory liability, since doing so could be performed readily and easily by any person of ordinary skill in the art, with neither undue experimentation, nor risk of unexpected results.

In regards to **claim 7**, Tamaki et al. disclose the method of claim 3, wherein said procurement and development assessment sub-process mitigation activities comprise at least one of: rebalancing demand and supply by shifting demand or supply from one geography to another; selling components back to vendors; negotiating with vendors to eliminate or reduce liability based upon mutually agreed to incentives that provide incremental value to both parties; using excess components as field parts in support of a warranty program or servicing requirements; qualifying excess components in new products; and adjusting said sales forecast to account for excess or constrained components (see for example column 14, lines 8-14).

In regards to **claim 8**, Tamaki et al. disclose the method of claim 4, wherein said liability council assessment mitigation activities comprise at least

one of: updating said sales forecast to account for excess or constrained components ; conducting squared sets analysis; brokering components or products that are no longer saleable; creating saleable bundles with other current offerings; developing option packages; determining alternative routes to market; and making liability write-off determinations (see for example column 14, lines 8-14).

In regards to **claim 10**, Tamaki et al. disclose the method of claim 6, but does not explicitly disclose wherein said liability write off mitigation activities comprise at least one of: negotiating with a vendor; and scrapping components associated with said liability.

However, the prior art reference Dangat et al does disclose wherein said liability write off mitigation activities comprise at least one of: negotiating with a vendor; and scrapping components associated with said liability (see for example column 9, lines 29-30).

Therefore, it would have been obvious to one of ordinary skill in the art, at the time of the invention, to have modified the method of Tamaki et al so as to have included wherein said liability write off mitigation activities comprise at least one of: negotiating with a vendor; and scrapping components associated with said liability, in accordance with the teaching of Dangat et al, in order to reduce excess inventory liability, since so doing could be performed readily and easily by

any person of ordinary skill in the art, with neither undue experimentation, nor risk of unexpected results.

3. Claims 9 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tamaki et al. (US 2004/0236641) as applied to claim 1 above under USC 102(e), in view of Kennedy et al. (US 6,167,380).

In regards to **claim 9**, Tamaki et al. disclose the method of claim 5, but does not explicitly disclose wherein said sales activities sub-process mitigation activities sub-process comprise at least one of: developing a promotion for long-term over supply through advertisements and communications media; offering a solution via alternate routes to market; authorizing pricing actions comprising at least one of: price decreases; discount incentives; and pricing delegations; establishing incentives for buying or selling; reassessing commission structures for an offering; and updating telesales team scripts for inbound and outbound telephone calls.

However, Kennedy et al. teach the method of claim 1 and include the method of claim 5, wherein said sales activities sub-process mitigation activities sub-process comprise at least one of: developing a promotion for long-term over supply through advertisements and communications media; offering a solution via alternate routes to market; authorizing pricing actions comprising at least one

Art Unit: 3687

of: price decreases; discount incentives; and pricing delegations; establishing incentives for buying or selling; reassessing commission structures for an offering; and updating telesales team scripts for inbound and outbound telephone calls (see for example column 4, lines 59-67, column 5, lines 1-3, and column 9, lines 1-5).

Therefore, it would have been obvious to one of ordinary skill in the art, at the time of the invention, to have modified the method of Tamaki et al so as to have included wherein said sales activities sub-process mitigation activities sub-process comprise at least one of: developing a promotion for long-term over supply through advertisements and communications media; offering a solution via alternate routes to market; authorizing pricing actions comprising at least one of: price decreases; discount incentives; and pricing delegations; establishing incentives for buying or selling; reassessing commission structures for an offering; and updating telesales team scripts for inbound and outbound telephone calls, in accordance with the teaching of Kennedy, in order to reduce excess inventory liability, since so doing could be performed readily and easily by any person of ordinary skill in the art, with neither undue experimentation, nor risk of unexpected results.

Regarding **claim 11**, Tamaki et al. disclose the method of claim 1 but do not explicitly disclose the method of claim 1, wherein said sales activities include: cross-sell; up-sell; alternative-sell; and down-sell.

However, Kennedy et al. teach the method of claim 1 and include the method of claim 1, wherein said sales activities include: cross-sell; up-sell; alternative-sell; and down-sell (see in particular column 4, lines 59-67, column 5, lines 1-3, and column 9, lines 1-5).

Therefore, it would have been obvious to one of ordinary skill in the art, at the time of the invention to include cross, up, alternative, and down selling techniques in the sales activities of the invention as disclosed by Tamaki et al, because by introducing various sales techniques within mitigation activities, a company can effectively minimize profit loss by offering customers products at lower costs, alternative products at the same price, bundles, and offer increased pricing to customers who want to receive specified goods on time. By increasing product and pricing alternatives to customers, the company can increase the likelihood of sales and profit, thereby reducing the liability caused by excess or constrained inventory.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
 - The reference Jameson (US 6,032,123) discloses a method and apparatus for allocating, costing, and pricing organizational resources.

- The reference Gleditsch et al. (US 6,397,118) discloses a method and system for providing sufficient availability of manufacturing resources to meet unanticipated demand.
- The reference Horne (US 7,058,587) discloses a system and method for allocating the supply of critical material components and manufacturing capacity.
- The reference Eck et al. (US 7,231,361) discloses a method, system, and storage medium for utilizing excess and surplus inventory.
- The reference Ferrari et al. (US 7,289,968) discloses forecasting demand for critical parts in a product line.
